Subject: CFAC "Clean Fill" pCOC concentrations

Cory,

Mike and I discuss the clean fill issue today and we reviewed the EPA Regional Screening (<https://semspub.epa.gov/work/03/2220581.pdf>) Level Summary Table and noted the following for industrial soils;

Cyanide – 12 mg/kg
Fluoride – 47000 mg/kg

We believe these would be appropriately protective for an industrial soil. Additional information would be required to better understand and agree to the 590 mg/kg that Calbag proposed for cyanide in the "clean fill" they anticipate using.

Please let me know if you have questions,

Tom
